

Figure 1 is a schematic representation of the experimental design. It shows a flow from a Pre-test (N=10) to a Training phase (N=10) and a Transfer phase (N=10). The Training and Transfer phases are then split into two groups: 'No feedback' and 'Feedback'. Each group has a 4x2 grid of conditions. The 'No feedback' group has conditions for Training (N=10) and Transfer (N=10), followed by a 4x2 grid of Test conditions. The 'Feedback' group has conditions for Training (N=10) and Transfer (N=10), followed by a 4x2 grid of Test conditions. The final step is a Post-test (N=10).
